A few comments from our 34th Spring Symposium

The Speakers and their presentations all were very informative

Great meals yesterday. Great speakers. MSS always puts on a great symposium.

The variety of topics

Location and Speakers

The whole program was great. We love to have this meeting here. Everyone does a great job!

The speakers and subjects were all interesting and with topics/presentations that were good for all levels of practice (student to experienced)

I enjoyed listening to the tips of scanning that would help me perform my job better.

It touches different topics. Becoming a MSS member gives you an added advantage to earn credits. The fee is very reasonable. It offers some great lectures.

I really liked that you could see all of the machines

Anne Sandoval had some fresh information. Rachel LaPinta "case review" interesting.

Mani's presentation of difficult patient's. Dr. Pozniak's presentations. Dr. Kremkau made physics entertaining and interesting.

Great speakers (national level) Good topic selections-something for everyone, General/Vascular/or students

Myron, Mani, Anne Frederick and Michael all were excellent and would like to see some or all again.
